

SHELL & TUBE HEAT EXCHANGERS

Shell & Tube Heat Exchangers are widely used for liquid to liquid and liquid to gas applications such as oil cooling, condensing, jacket water or gas cooling.

McMillan Engineering Group can design, fabricate and supply complete Shell & Tube Heat Exchangers in any size or configuration. We can design to AS 1210, AS 1228, ASME VIII or BS 5500. Alternatively we can manufacture to your specific design.

We can manufacture from the following materials:

- Carbon steel
- Stainless steel
- Copper alloy
- Inconel
- Nickel
